## 1 Introduction

In order to get a an external view of the developed training material and the teaching methods the advisory group visited the training of the trainers in Biberach, Germany, from 19.-21.07.2010. They participated on the second day of the training (20.07.2010).

Due to a late last minute cancellation of one member only six members of the group had been in Biberach (see Appendix I) instead of the intended seven members.

## 2 Report of advisory group

After their participation of the training course the advisory group had a meeting and discussed their views. The outcome of their opinion had been written into a report (see Appendix II).

## Appendix II Report of Advisory Group

Tuesday, 20 July 2010

General comments:

Feedback from the trainers who participate in this course indicates that they are unaware of the objectives of the TrainEnergy Program

The content is of good state and valid.

All the answers of the survey have been taken into consideration

📌 Course/Modules structure:

There is no general framework to ensure the interaction between the modules.

The depth of the modules is very different.

Please provide us the reason

📌 Content

The actual content must not be considered as a final product but as a resource to build courses suitable for different national target so the trainers will be able to build a module using the available content and perhaps other sources.

Some chapters provide good quality material with a lot of details including graphics and figures; they are very technical so they allow them to produce adequate modules. Some of them need improvement.

The trainers need some more clarification about the level of the target group in order to finalise and adapt it in every national/local trade/market needs.

We need more:

1. Illustration of best and worse practices.
2. Theoretical and practical exercises and examples are completely missing
3. Multidiscipline project (to reassure interface between trades) at the end of the course for assessment.
4. Size of graphics and text suitable for adult students
5. Please provide us with lessons plan per module (objectives, learning outcomes, method of assessment)
